

Wind loading near fairy lake

Date

Thu, 11/10/2022 - 11:00

Activity

Skiing

Around 2ft down in the pit that was dug there is a generally stable storm slab but it still broke after 5 elbow strikes. Finger tip strikes did trigger a 3-4 in wind slab in the pit and a remotely triggered wind slab was observed halfway up the whiteworm. 40 wide and 5 in deep it ran for about 60 yd.

Region

Bridger Range

Location (from list)

Fairy Lake

Observer Name

Colin Howell
