

Weak layer ~30 inches down at Hyalite

Date

Fri, 02/17/2023 - 10:00

Activity

Skiing

We were in the Lick creek area and did an ECT test, the new snow appeared to be bonded well but on ECT 20 we got a clean sheer about 30 inches down across the column. We headed back to lower angle terrain.

Region

Northern Gallatin

Location (from list)

Lick Creek
