

Mt. Ellis

Date

Fri, 02/17/2023 - 13:50

Activity

Skiing

Went for a quick tour up Ellis today. Dug twice along the ridge, both pits had ECTN 12-14 under the new snow. Top of Ellis was worked by the east winds. Worked my way down carefully on the southern end of the Meadow area. Overall the [stability](#) seems to have improved since Doug and Ian were up earlier in the week.

Region

Northern Gallatin

Location (from list)

Mt Ellis

Observer Name

Karl Birkeland
