Big Avalanche Crown, N. Absaroka Range

Arrastra Creek Out of Advisory Area 4/2/2023 Code HS-N-R4-D3-O Elevation 10200 Aspect SE Latitude 45.26430 Longitude -110.61700 Notes

From email: "Saw this recent crown while xc skiing out above Mill Creek today. It's on the east-southeast <u>aspect</u> of Peak 10526 east of Emigrant Peak at ~10,200'. In what I like to call the Arrastra Ridge Avalanche Observatory Plot*. The photo is taken approximately 5 miles in line of sight from the crown. It is roughly 1000' wide. If I had to guess, the crown is 10'+ tall—definitely a very destructive avalanche. I won't venture a guess on the rating. I'd bet good money it ran all the way to the lake at the head of Burnt Creek and rearranged some timber.

*If one wanted to create a laboratory for observing large, regularly occurring naturally triggered avalanches, this would be one of the best locations in SW MT."

Number of slides 1 Number caught 0 Number buried 0 Avalanche Type Hard slab avalanche Trigger Natural trigger R size 4 D size 3 Bed Surface O - Old snow Problem Type Persistent Weak Layer Slab Thickness 120.0 inches Slab Width 1000.00ft
