

Bridger Bowl Touring

Date

Thu, 04/13/2023 - 17:30

Activity

Skiing

skinned up to the ridge and observed 5-9 inches of new and accumulating snow forming into wind drifts that were highly reactive. Multiple remote triggers occurred while traveling N on the ridge, propagating both on W and E faces of the ridge. Both Hidden and Northwest Passage slid with little effort down to an icy bed surface. Debris at bottom of hidden was substantial but great skiing.

Region

Bridger Range

Location (from list)

Bridger Peak
