

Hyalite Tour

Date

Sat, 01/06/2024 - 03:25

Activity

Skiing

From email: "Made it to the ridge of Hyalite peak yesterday. Mild winds ~10mph at around 1pm. Seemed to be ~6" of fresh snow in the basin. No instabilities in our pit at 9300ft; fist hardness throughout. 85cm depth. Great skiing in the basin. Off the ridge, it was a little firmer with a wind crust. There was a small natural [wind slab](#) avalanche on an east [aspect](#) a few hundred feet SW of the saddle."

Region

Northern Gallatin

Location (from list)

Hyalite Peak

Observer Name

Patrick Honsinger
