

Natural Avalanche on Bridger Peak

Bridger Peak
Bridger Range
2/18/2024
Code
N-R3-D2.5-O
Elevation
8500
Aspect
NE
Latitude
45.77000
Longitude
-110.93900
Notes

From obs 2/20/24: "On the drive up Bridger canyon this morning we noticed an avalanche on an east-northeast facing slope at the ridge near Bridger peak that was not previously noted or reported. Likely natural, possibly happened overnight or yesterday, but maybe earlier and went unnoticed? It looked 1-2' deep with rocks showing through parts of the [bed surface](#).... Debris did not appear to make it all the way down the chute to flatter runoff. But, light was not great and all dimensions were difficult to confirm."

On 2/21 we drove up to look at the [slide](#) through binoculars. The [slide](#) broke full width of the [starting zone](#) and obviously ran to the bottom of the path, although the debris was not visible. Measured on gps, the [slide](#) is 300-450' wide

[Slide](#) was noticed by a member of BBSP on Monday 2/19, and likely happened on 2/18 or late 2/17.

Number of slides
1
Number caught
0
Number buried
0
Trigger
Natural trigger
R size
3
D size
2.5
Bed Surface
O - Old snow
Problem Type
Persistent Weak Layer
Slab Thickness
18.0 inches
Vertical Fall
1800ft

Slab Width

350.00ft
